

Asset List

T-ReX Global's research team has compiled an exhaustive list of depreciable assets using data from the **2005 United States Housing Survey**, which lists the most common equipment found in American homes.

Use this list as a reference to help you find assets on your property that can increase your depreciation deduction. By separating these assets and allocating their values, you can depreciate your short life assets sooner, resulting in a larger depreciation deduction and more tax savings.

Along with the most common assets, this document also lists other uncommon assets, which the IRS has determined to have the following class lives (refer to cases/rulings):

5 Year Life Assets

All assets under the 5 year life fall under the classification of 'Tangible Personal Property' and are short life property assets.
